INTRODUCTION

Indonesia is predicted will be at condition Demography Window in 2045 or 100 years independent. Nowadays indonesia will have 20% population productive life. It is potential for indonesia to become visible country on the world. The key of the created hope is rising quality of the source of human energy that will be gained by education. So that, it's important for education to do innovation in everything, include mind-set and learning and teaching set. The maening of learning invironment concept is one of the education program for next generation that must be empowered with real care. Education is not just meant with academic transfer on the cognitive around, but also completed with carachter and attitude scientific. The balance of academic and carachter that need to be prepared from now. It becomes responsible us to educate and guide our young generation to create indonesian gold 2045 in the future.

This International seminar has a purpose to recite deeply every cases study that relation with effort to reach concept of environment education continuously that can interpret learning of social science specially and other learning. Every opinion/thought to concept of environment education continuously and thought of scientific relate with role of PIPS in the scope learning at school. I hope in this international seminar students, students of college, teachers, lecturers, reseacher, and who takes the policy can discuss and share each other to build together the effort to do concept of environment education continuously as an important agenda to bright gold generation 2045.

Link with those, study program education social science (PIPS) postgraduate work school UPI Bandung has an importance in the learning innovation by reaching education purpose. So that, PIPS SPs UPI Bandung will run an agenda every years that form international seminar with combining all of activities scientific contest. The topic "the topic studies contribution to reach periodic environmental education into stunning generation 2045" hoped can give a place for seeing each other teacher, students, students of college, lecturers, LSM, the carrying education and official link to recite all of innovation and implementation concept of environment educaation continuously in the attempt doing golden bright education to vision, mission, and aim national educational.

"Concern with Social Studies, Look Around and Save Our Planet" Thank You.
