Abstract

Community forest is a state forest whose main use is intended to empower local communities as explained on Republic of Indonesia Minister of Forestry Regulation No. P.13/Menhut-II/2011 juncto Regulation of the Minister of Forestry of the Republic of Indonesia Number P.88/Menhut-II/2014 and Regulation Minister of Environment and Forestry of the Republic of Indonesia Number P.83/MenLHK/Setjen/Kum.1/2016 concerning Social Forestry. The implementation of community forest cannot be carried out by forestry officers or the Protection Forest Management Unit (KPHL only), but it requires support and commitment of the parties in its implementation, namely the Regional Government, Non-Governmental Organizations, Community, Forest Farmers Group (KTH), community forest permission holders and other parties. The problem in this study is, how is the role of stakeholders in the policy of community forest utilization? The method used is descriptive qualitative. The location of this study was in Central Lampung Regency and North Lampung Regency. The conclusion from this research are: 1) Implementation of community forest policies in Central Lampung and North Lampung Regencies by implementing the Minister of Forestry Regulation No. 37 of 2007 and the amendments thereof, in conjunction with the Regulation of the Minister of Forestry of the Republic of Indonesia Number P.88/Menhut-II/2014 concerning Community Forest and the Minister of Environment Regulation and Forestry of the Republic of Indonesia Number P.83/MenLHK/Setjen/Kum.1/10/2016 concerning Social Forestry. 2) Organizing community forest through empowerment activities requires support and commitment of the parties in its implementation including stakeholder support. 3) Coaching of community participation, collaboration between stakeholders on the management of community forest has not run optimally, there is still lack of human resources owned by KPHL especially field facilitators. Important suggestions/recommendations regarding the conclusions of the results of this study are: 1) Constraints on applying for permission to manage community forests are complicated bureaucratic sequences, and lack of budget to facilitate groups that will apply for community forest management licenses. 2) There has not been a trust or mutual trust and creating conflict of interests in the management and utilization of community forest through this empowerment activity, because it requires mutual trust from each party involved, so that everything can be done together.

Keywords: collaboration, stakeholder, community forest policy, poverty reduction, Lampung Province.

1 Introduction

Community forest is a state forest whose main use is intended to empower local communities as explained on Republic of Indonesia Minister of Forestry Regulation No. P.13/Menhut-II/2011 juncto Regulation of the Minister of Forestry of the Republic of Indonesia Number P.88/Menhut-II/2014 and Regulation Minister of Environment and Forestry of the Republic of Indonesia Number P.83/MenLHK/Setjen/Kum.1/2016 concerning Social Forestry. The implementation of community forest cannot be carried out by forestry officers or the Protection Forest Management Unit (KPHL only), but it requires support and commitment of the parties in its implementation. On the implementation of the Community Forest program, there are several things that need to be common commitment, namely:

1. The organizing of community forest (Hkm) must be in accordance with its paradigm, vision and mission.
2. The implication of community forest related to the needs which arise include: knowledge or education and training for community forest farmers, costs/budgets, institution, political support, resources, etc.

The parties that are expected to commit are Local Governments, Non-Governmental Organizations, Community, Forest Farmers Groups (KTH), community forest permission holders and other parties. Legitimacy, management certainty is recognized and must be proven by the issuance of IUPHkm licenses (Community Forest Management Business Permission). The problem in this study is, how is the role of stakeholders in the policy of community forest utilization?

Specific goals and benefits to be achieved in this study are: 1. Improving the welfare of the community in order to utilizing the community forest by continuing to comply with the juridical arrangements for the rights

of the management and utilization of the community forest. 2. Produce legal draft policy models for inter-regional cooperation on community forest management in Lampung Province. 3. Collaboration between stakeholder on management and utilization of community forest.

2. Research Method

2.1 Type and Approach of The Research

Type of this research is descriptive research with qualitative approach. The location of this research are located in: North Lampung Regency and Central Lampung Regency.

2.2 Research Focus

1. The Collaboration between stakeholders on management of community forest.
2. Obstacles encountered.

2.3 Type and Source of Data

1. Informant that selected purposively based on their competence, namely, Lampung Provincial Forestry Service, Protection Forest Management Unit (KPHL) of North Lampung Regency, Protection Forest Management Unit (KPHL) of Central Lampung Regency, Forest Management and Conservation Group (KPPH Hkm) in North Lampung and Central Lampung Regency, Combined Community Forest Farmers (Gapoktan Hkm of North Lampung Regency and Central Lampung Regency).
2. Community that lived around registry region of Way Waya, North Lampung Regency and Central Lampung Regency that selected purposively.

As Secondary Data, documents, laws/regulations which relevant to the substance of the research will also be used.

Data Collection Technique: Data was collected through interviews with key informants/resource persons, documentation studies, field observations/field research and Focus Group Discussion (FGD).

Data Analysis Technique: Miles and Huberman on Sugiyono (2006) said that in qualitative research, the steps of data analysis are data reduction, data presentation and verification/conclusions.

Data validity Technique: To determine the validity of the data in qualitative research, there are several requirements in the examination of data using 4 (four) criteria (Moleong, 2005), namely: credibility, transferability, dependability, confirmability. To check credibility (Moleong, 2005) the researcher conducted triangulation, and negative case analysis techniques by collecting samples and cases that were not in accordance with the patterns and trends of information which had been collected and used as comparison material (Moleong, 2005).

3. Discussion

Community Forest Policy (Hkm)

Community forest programs can be means to achieve sustainable development goals. Obstacles or limitations on the implementation of community forest policy are gaps in community resources, facilitators and funding. Constraints and limitations will always exist in every strategy for implementing a development program including community forest policy.

Collaboration Between Stakeholders on Management of Community Forest Program

The collaboration process between stakeholders in the management and utilization of community forests in Central Lampung Regency, starts from the planning process according to Allen (Siswanto, 2001:45) which consists of: forecasting, setting goals, and developing procedures.

(i).Forecasting

Forecasting is a systematic effort to predict/estimate the possibilities that will come with drawing conclusions on a plan. Based on the presentation of the Forestry Service Master Plan in 2007-2026, an identification was made which later revealed that at the planning and management stage of the community forest area, the Forest Service/KPHL tried to establish a collaborative process. The collaboration process has not yet been seen in the process of utilizing the Hkm area which has not fully involved the stakeholders. The government also still impresses the sectoral ego, can be seen in the process of determining which parties are involved by the Forestry Service/KPHL and the types of activities that are determined.

(ii) Setting Goals.

Way Waya community forest area must be managed jointly for common interests as well. Then Supoharjo (2006:20) added that there are several methods which can be used to optimize the collaboration process in managing forest resources, including:

a) Transactive Planning

Effective planning requires direct involvement of the community and existing stakeholders. Then after creating a forum from various parties the next important thing to do is mutual tolerance and mutual learning, so as to be able to fuse existing differences. This will also create a trust in forest management together

b) Interested Community and Taking Open Decision

To soak up adverse conflicts in the forestry sector, we need to find new ways to get people to talk to each other about what they really want from the forest, and find effective ways to engage them in the field of dialogue between citizens and educate each other about their needs and their values.

c) Collaborative Learning

When managing and utilizing the Way Waya Hkm area, collaborative learning is needed to encourage all parties to identify and assess innovative approaches to resolve differences

(iii) Procedure Development

Procedure development means an activity to normalize the ways, techniques and methods of implementing a program. In the management of the Way Waya Hkm area, KPHL Central Lampung Regency and North Lampung Regency and the Lampung Provincial Forestry Service act as leading sectors or regulators who will develop the forest area management system. As a leading sector or as a regulator, technical operators and implementers, the Forestry Service or technical implementing units have an obligation to establish cooperative relations in the management and utilization of Hkm in Central Lampung Regency and North Lampung Regency.

2). Community Participation Coaching

Coaching community participation means providing knowledge to community groups in order to have knowledge about forestry especially the Hkm Program (community forestry), especially Hkm permission issues. Forms of community development in the Way Waya Hkm area which has been carried out in the form of counseling, socialization, and dialogues/discussions. Internal constraints faced in the collaboration of Way Waya community forest management and utilization include: lack of human resources, occurrence of attraction or overlap in the management of the forest park shelves, not yet creating a synergic understanding and not creating trust between stakeholders. there is. Then the other inhibiting factor is the lack of trust between existing stakeholders. With the creation of trust, of course, it will further optimize the collaboration process so that it will have a positive impact on the subsequent management process of Hkm and of course there will be no attraction and overlapping of interests because all stakeholders are in the same line, the same rule and in the same destination.

1 Conclusion

The conclusion of this research are: 1) Implementation of community forest policies in Central Lampung and North Lampung Regencies by implementing the Minister of Forestry Regulation No. 37 of 2007 and the amendments thereof, in conjunction with the Regulation of the Minister of Forestry of the Republic of Indonesia Number P.88/Menhut-II/2014 concerning Community Forest and the Minister of Environment Regulation and Forestry of the Republic of Indonesia Number P.83/MenLHK/Setjen/Kum.1/10/2016 concerning Social Forestry. 2) Organizing community forest through empowerment activities requires support and commitment of the parties in its implementation including stakeholder support. 3) Coaching of community participation, collaboration between stakeholders on the management of community forest has not run optimally, there is still lack of human resources owned by KPHL especially field facilitators

Important suggestions/recommendations regarding the conclusions of the results of this study are: 1) Constraints on applying for permission to manage community forests are complicated bureaucratic sequences,

and lack of budget to facilitate groups that will apply for community forest management licenses. 2) There has not been a trust or mutual trust and creating conflict of interests in the management and utilization of community forest through this empowerment activity, because it requires mutual trust from each party involved, so that everything can be done together.
