FOREWORD

International Seminar and Annual Meeting (SEMIRATA BKS-PTN) Western Region field of Language, Literature, Arts and Culture - 2017 organized in Medan (Sumatera Utara), 12 – 14 September 2017. The theme “The Implementation of Language, Literature, Arts and Cultural Studies in Strengthening The Nation’s Civilization”

Civilization is a cultural phase in human life. Civilization is characterized by the ability to master science, knowledge, technology, and art (IPTEKS) consciously. The sub theme of this activity is the utilization of the results of studies of language, literature, art, and local culture in the development of learning materials and the reinforcement of civilization of the nation; revitalization of values in language, literature, art, and local culture in the life of a nation and society; examine the prospects of language, literature, art, and local culture to become a national cultural value to strengthen national civilization; assessment of local cultures to find similarities with national culture; contribution of the studies of language, literature, art, and culture in the development national civilization; the study and creation of art to strengthen national civilization; revitalization of language, literature, art and local culture to establish the national civilization.

The realization of the International Seminar and Annual Meeting and the issue of the Proceeding in collaboration with many people. Appreciation goes to the Head of BKS-PTN Western Region, the Rector of Medan State University, Deans, Vice Deans associated in BKS-PTN Western Region in the field of Language, Literature, Arts and Culture; keynote speakers, presenters and participants of the 2017 SEMIRATA in Medan, particularly the committee.

Hopefully, the proceeding can inspire many people to keep improving and developing the science of language, literature, arts and culture that will benefit in strengthening the national civilization.

EDITOR FOREWORD

International Seminar and Annual Meeting of the State University Cooperation Agency (SEMIRATA BKS-PTN) West Region in the field of Language, Literature, Arts and Culture is one of the annual activities aimed at establishing cooperation among State Universities in the Western region of the Republic of Indonesia to encourage, develop, and advance the institutions that are members to continue to move forward in order to prepare for the face of the ASEAN Economic Community and also the era of globalization in general.

The development of creative industries has encouraged various parties to continue to innovate in various fields; not to forget also the field of linguistics, literature, art, and culture. There are so many ideas, thoughts, and formulations that can be raised as creative ideas to start the creative industries as stated in this proceeding. The book emphasizes the development of creative industries in the fields of linguistics, literature, arts, and culture that have been studied and formulated by lecturers and researchers from various universities in Indonesia, Malaysia and Singapore. The book also provides ideas on how to apply teaching and learning as well as curriculum development to be able to preserve the language, literature, arts, and culture in schools.

This proceeding is divided into 6 sections:

The first part is the five papers conveyed by the main speakers (Keynote Speakers). This section deals with intercultural learning in the language of a German, the study of language, literature, art and culture in Asian civilization, and the uniqueness of public transport in Minangkabau through the experience of an Australian professor.

In the second part there are eighteen papers that examine about the science of language. This section provides an analysis of paradigmatic relationships in cultural texts, projection in Indonesian newspapers, lexical changes in regional dialect, Malay identity in Indonesian, Indonesian translation principles and procedures into English, Indonesian slang formation in Instagram comment, kinship system, language attitudes, lexical language innovation, grammatical abuses, use of language in chat, comic language, language learning approach, student speech performance, regional figurative language function, role of local language expression, and gender language differences in film.

A total of nine papers in the third part of this proceeding related to the field of literature. The nine papers provide an overview of the mantras in local language poetry, the values in folklore, the span of domination of literary works, the inventory of saga as a learning material, the defense strategy of silat as the cultural identity of the nation, the cultural rules as the means of national preservation, the acceptance of literature through facebook, the relation of mantra meaning, and the nuances of local culture in the novel.

Art studies are listed on four articles in the fourth section of this paper. The studies raised the idea of a traditional dance trip to the creative industry, the rhythm of reading music patterns, the identity of the nation through the clothing of tradition, and establishing identity through local art performances.

The twenty-nine theme of culture in the fifth part of the proceedings discusses character education, local cultural semiotics, local cultural performances, local cultural institutions, in regional traditions, non-cultural heritage, plural society interactions, cultural acceptance, traceability of food, courtesy in digital languages, traditional tools symbolism, and clothing motifs for character formation of students.

The last section covers the application of linguistics, literature, arts, and culture in the lessons of papers which are from research to formulation of ideas in this section. The papers cover aspects of education based on language and literature learning, development of teaching materials based on cultural values, regional stories, oral literary texts, and the use of online or pantun-shaped instructional media and natural laboratories. In addition, the curriculum of cultural arts and learning strategies is also discussed both inductive-deductive, project-based learning, learning styles, seating positions, role playing, performing arts, songs, regional literature, and theater.

Building the National Identity with the Literacy Culture Revitalization

Muhammad Fuad

ABSTRACT

In the Indonesian context, there is an opaque portrait of uncertainty in the ownership of the nation's identity. There are indications that the symptoms of this uncertainty continue to flourish in the life of the community because they are less able to exploit their potential and understand the values contained in cultural products. It is said because of how low the literacy culture of our society today, even not least in the academic circles. This is the problem that is in front of our eyes so that the government proclaimed the learning program of the nation's character values as the slogan 'build character human'. Some of the study notes on literacy culture in this country reported by academics, government, and NGOs show disappointing report cards. The literacy culture of the community, especially our high school students towards literary texts is still low-is still below standard. The culture of reading short stories / novels of our high school students averaged 0.017% of 5 short stories / novels to be read per year. Unfortunately, although it has been found evidence of low literacy culture until now there is no clarity of follow-up. All of them are still in the level of concepts and regulatory documents. It certainly needs to be addressed and looked for concrete solutions in order to grace the diversity of cultures into a blessing, at least a very valuable asset that can be utilized in building a dignified nation civilization. Thus, massive and simultaneous cultural literacy revitalization program can be one of the strategic concepts to cultivate early reading culture, both formally and nonformally, which ultimately establish the identity of a dignified nation. Only God knows the truth.

Keywords: *Culture of Literacy, National Identity*

INTRODUCTION

There is no argument that understanding of cultural values by students in schools needs to be encouraged in earnest. However, this is interesting to discuss because recently many people are questioning the decline for students in understanding the cultural values that exist in our country, Indonesia. Interest in this issue, especially the subject matter of the subject matter that teachers should teach to learners. Teaching done by teachers in order to create results and impact of quality education. Media and learning resources that can stimulate learners to learn. Form of linear assessment of learning with student learning activities and have high validity. Not a few people who blame the teacher for lack of able to provide learning materials to students in school. The point is the allegation to teachers, especially Indonesian language teachers.

The change of learning paradigm of Indonesian language is contained in the Regulation of the Minister of National Education (Permendiknas) number 22 of 2006 on Content and Permendiknas Standard number 23 year 2006 on Graduate Competency Standard (SKL). In this Permendiknas disclosed that learning Indonesian in schools or madrasah directed at improving the ability of learners to communicate in Indonesian language properly and correctly, both orally and in writing, and foster an appreciation of the work of human literature Indonesia (Depdiknas, 2006). This amendment is one of the realizations of Government Regulation number 19 of 2005 on National Education Standards as the launching of the quality of education which is fully contained in the Strategic Plan 2005-2025 in the form of "Policy of Quality Improvement, Relevance, and Competitiveness". Changes as mentioned above have consequences for the changing strategies of educators in learning Bahasa Indonesia. Educators must change in helping learners to speak and literate. It is not the same as other teaching teachers who transfer knowledge to learners, but rather train their language or literature skills. Indonesian Language Lessons in schools are not about linguistics or literature, but an increase in the ability to communicate spoken and written. Thus, the current Indonesian language learning should be directed at building a culture of literacy. The literacy culture in the Content Standards is demonstrated by the subject matter of Indonesian learning which is divided into four competency standards: listening, speaking, reading and writing. In addition, at the end of each level of education, elementary / junior high school and junior high school students at least have read 9 books, while high school / MA students have at least read 15 literary or nonliterary books. The provisions in this standard are the minimal targets of Indonesian language learning in schools or madrasah.

The big question arises whether this can happen? This question is a reflection for all of us. (1) Can educators change the course of Indonesian learning as expected? (2) Did the educator have changed the learning strategy from explaining activities and the students listened to the students doing (listening, speaking, reading, writing) and educating leads? (3) Do educators have developed a culture of literacy?.

METHOD

Blurry Picture in Language Learning

Many people are still worried about the quality of Indonesian language learning. When compared with developed countries, high school students in America, the Netherlands, and France are required to read 30 literary books. Similar in Asian countries, such as in Japan students are required to read 15 literary books, in Brunei are required to read 7 literary books, and in Singapore are required to read 6 literary books. In line with the desire to improve reading ability for students in our country, the Content Standards should set the target number of literary and nonliterary readings to read. However, in reality this is still neglected.

The quality of Indonesian language learning, especially literature has not touched the essential problem. The emphasis of competency standards in the Content Standards by simply referring to four language competencies (listening, speaking, reading, and writing) is still not well understood by educators. This fact is still found when educators to be learn students to read with the standard of competence "understand the variety of written discourse with intensive reading" with the basic competence of "finding intrinsic elements through intensive reading activities". In the classroom teachers explain both types of standards through lecture and question and answer techniques. Furthermore, students practice writing down the intrinsic elements present in the reading. Up to the end of the lesson, students are not assigned to read other literary texts with the aim of generating a habit for reading pleasure.

Indonesian lessons, especially literature is one of the subjects tested-the state. Preparation of the UN is organized by BSNP and Puspendik Depdiknas by inviting the selected teachers to arrange questions in accordance with SI and SKL with the direction of the expert. Each question is selected very closely with the study of various parties is intended to be a matter of valid and reliable. Due to the consideration of the division of authority, not all competencies in the Indonesian language lessons are UN-assigned, as they must provide portions for the School Exam in measuring listening and speaking competencies. The issue of UN is more directed to measure the competence of reading and writing. But in reality, Indonesian teachers at junior and senior high school / vocational or MA / MAK levels are always haunted by fear that their students cannot answer the questions well. Not a few of them then make various "naughty" attempts to dispel the fear, even "neatly organized". In addition, the courage to assign literary reading has not been done, although in reality it can be given to students through extra-curricular activities. Another problem is the condition of educator resources that have not been adaptive and visionary. In some schools, there are still educators who use lecture techniques to teach students to learn language and literature. They assume that if not explain by lecture does not include teaching. In fact, Indonesian teachers do not have to teach "language or literature", but make students learn to use language or literature in the context of their lives. Students should be given valuable literary experience in real-world language, not the school world. This is in line with Magnessen's expression (in Silberman, 1996) that "we learn 10% of what we read, 20% of what we hear, 30% of what we see, 50% of what we see and hear, 70% of what we say, 90% of what we say and do." Thus, if the teacher teaches students to read literature by explaining literary notions, literary types, and how to love literature, students get only 20% Of the material that should be taught. Unlike the case if the teacher to be learning experience of literature. Student must disclose and perform programmatic appreciation activities with clear objectives so that material acquisition will reach 90% of what the teacher teaches.

RESULT

Along with this, the facilities and infrastructure that support literacy activities also become one of the keys to the success of learning and in creating a literary environment (Guo, Sawyer, Justice, & Kaderavek, 2013). However, this also remains a problem when, the availability of supporting facilities and infrastructure, especially in many basic education schools are not adequate. Based on observations from four kindergartens (12 classes of PAUD) that are quite representative in Bandarlampung, it was found that the average of media availability for writing activity was 52%, and the average reading media availability was 54%. In general, the implementation of new literacy activities fulfilled by 56.4%.

Figure 1. Data Observations Kindergarten Literacy

In detail, the availability of reading literacy media can be seen from three indicators, namely the use of books, book selection, and reading area (Grace et al., 2017). The observation result shows that the percentage of reading area is 22%, still far behind with the other two indicators.

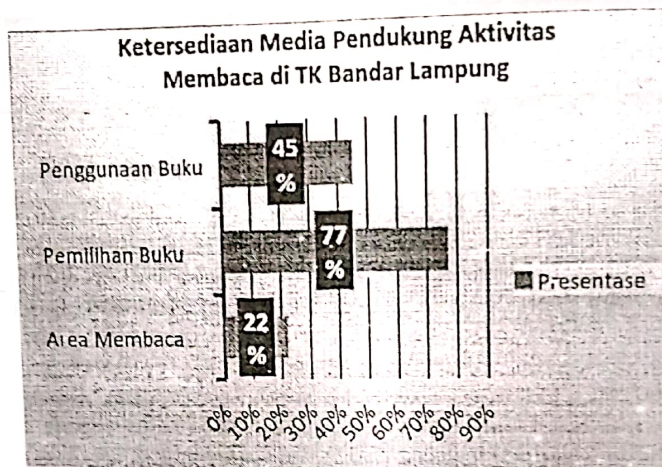

Figure 2. Media Literacy Reading Observation Results

The reading area is related to the organization, access and approach of each child in a book in the classroom (Grace et al., 2017). Some schools in Bandar Lampung have a reading area in the form of a library with separate rooms and classrooms. In addition, the availability of books physically adequate in schools, has not been supported by the organization or use of books that can be accessed directly by children.

Figure 2. Media Literacy Reading Observation Results The reading area is related to the organization, access and approach of each child in a book in the classroom (Grace et al., 2017). Some schools in Bandar Lampung have a reading area in the form of a library with separate rooms and classrooms. In addition, the availability of books physically adequate in schools, has not been supported by the organization or use of books that can be accessed directly by children.

On the other hand, the use of books relates to how much choice or variation readings in books are in the classroom or school. In fact, some schools have several variations of reading books, but this is not supported by the approach or reading activity that allows the child to interact frequently with the book. In fact, the lack of interaction with the book can reduce the child's favorite of activities or reading activities. This is in line with Gilkerson, Richards & Topping (2017) research, which states that the success of children in reading begins with the interaction between children with books and adults. In this case, adults can act as scaffolds for children to introduce and bridge between the world of reading and the real world so that children have their own appreciation of the world of reading.

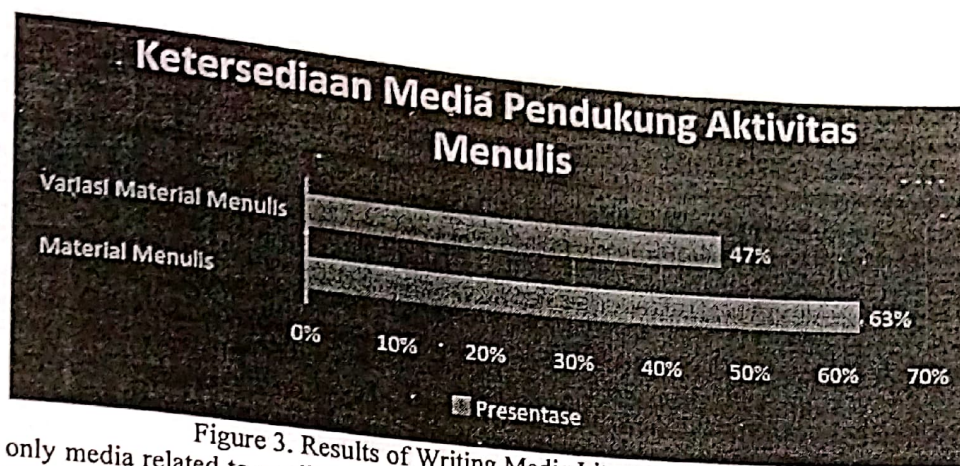

Figure 3. Results of Writing Media Literacy Observation

Not only media related to reading, media writing activity is also part of literacy activities that cannot be separated by reading activities. The results of observation indicate that the availability of material or media variation to write is still below 50%, while media or supporting tool of writing activity fulfilled by 63%. This illustrates the not yet optimal development of literacy writing learning, especially with regard to the type or variety of tools used for the writing activity itself.

In general schools only provide simple stationery such as pencils, pen, and paper for writing recognition activities. In fact, the introduction of writing activities certainly cannot be separated by reading activities, in the sense that writing activities need to be supported with activities as interesting as reading activity. Literacy awareness is of course straight-line with the ability to read and write so as to create a literary environment requires maximum effort, especially in the development of learning and the provision of facilities and infrastructure that can support learning holistically (Compton-Lilly, 2015).

The findings in the field also illustrate that literacy activities in schools are currently centered or dominated in writing training rather than reading. The proof, reading activity in school reached 51%, while writing activity reached 68%.

Figure 4. Literacy Activity Observation Results

The findings also illustrate that the literacy culture in schools today still prioritizes literacy as compared to reading culture. In line with the discovery of Campbell, et al (2011), Indonesia's reading culture is ranked at 500, or only 0.001% below the State of Saudi Arabia. Cultural literacy is still thick with drill or training to improve writing skills. In fact, the writing culture will not be born without any reading culture.

DISCUSSION

The Need for Literacy Cultural Revitalization

In the literature of language learning, literacy is defined as literacy, literacy, literacy or literacy in reading and writing (Teale & Sulzby, 1986; Cooper, 1993: 6; Alwasilah, 2001). Understanding of literacy based on the context of its use stated Baynham (1995: 9) that literacy is an integration of listening, speaking, writing, reading, and critical thinking skills. James Gee (1990) defines literacy from the ideological point of view of discourse which states that literacy is mastery of, or fluent control over, a secondary discourse. In giving this understanding Gee uses the rationale that literacy is a skill a person possesses from the activities of thinking, speaking, reading, and writing.

Stripling (1992) states that literacy means being able to understand new ideas well enough to use them when needed. Literacy means knowing how to learn. This understanding is based on the basic concept of literacy as literate discourse so that the scope of the literature that revolves around all efforts made in understanding and

mastering information. Robinson (1983: 6) states that literacy is the ability to read and write well to compete economically in full. He further explained that literacy is the ability to read and write related to the success of someone in the academic community so that literacy is a tool that is owned to be able to reap success in the social environment. The National Assessment of Educational Progress defines literacy as the ability to read and write performance that is necessary throughout life (Winterowd, 1989: 5). A jurist considers that literacy is a competence in understanding discourse, both as a reader and as a writer, so as to show the person as an educated professional who not only applies for the duration of learning but applies it well forever (White 1985: 46).

Based on the above description it can be stated that literacy is (1) literacy or literacy; (2) the ability to integrate between listening, speaking, reading, writing and thinking; (3) the ability ready to be used in mastering new ideas or how to learn them; (4) the ability device to support its success in the academic or social environment; (5) the ability to read and write performance is always required; (6) the competence of an academic in understanding discourse professionally.

From the literacy concept in the country has developed learning model of literacy, for example (1) ESL (English as a Second Language) Literacy Model (Ranard and Pflieger, 1993); (2) Ocotillo Information Literacy Competencies Model (Evans, 1994); (3) Literacy Model Developing an Instructional. (Davis, 1996); (4) Mediation for Dynamic Literacy Instruction Model (Dixon-Krauss, 2000); (5) The Information Literacy Model (Sigmon, 2000); And (6) Construct Meaning Model (Cooper, 1993). These models have succeeded in improving the students' ability to live in a literary society, both academic and other social activities.

From the fact we witnessed the learning of Indonesian as described above, it seems that the direction of learning in school must be changed. Learning Indonesian language, especially the literature should be directed at building a culture of literacy, especially learning that can increase the activities of learners using teaching materials in life. Learners need to be directed to speak or literate in the real world, not the school world. Yanni (1995: 40) states that literacy-based learning is done by developing ideas or ideas through the development of questions at time of writing, then developing them through interrelationships and controversies of ideas. Literary culture-based learning in the education world has an advantage because the literacy model is not only meant for students to have the capacity to understand the conceptual meaning of the discourse, but the ability to participate fully in implementing social and intellectual understanding (White 1985: 56).

In line with some of the above ideas, it is clear that literacy-based learning will condition learners to become literary. Increased literacy skills in learning in line with educational objectives, namely the development of potential learners to become human beings who believe and piety to God Almighty, have a noble, healthy, knowledgeable, capable, creative, independent, and become citizens of a democratic and responsible (Depdiknas, 2003). Obtaining this goal can certainly be done if the students have become a literary figure. The students who have the provision of literacy in him will be able to equip themselves with the expected ability.

The process of developing language and literacy skills should be undertaken by developing cognitive abilities, analysis, synthesis, evaluation, and creation through a direct study of social conditions using the ability to think carefully and critically. Need the process of understanding the learners of social phenomena with the introduction directly will make it easier for learners in developing competence. Learners should be familiar with reading various information and accessing information from electronic media or written media. In addition, he needs to follow the development of civilization that is going on factually. Therefore, in developing literacy-based language and literacy competence should be supported by the availability of facilities in building human literacy.

In-class educator activity when conducting less linguistic-based Indonesian language learning, ie (1) directing the activities of learners; (2) selecting and preparing study materials; (3) checking the work of learners; (4) directs the system to communicate scientific knowledge; (5) coordinate in preparing class background for literacy activities.

Support to learning resources, in the form of facilities and infrastructure must also be a concern. Along with the changing paradigm of literacy learning from the concept of development toward the emergent literacy, then of course there must be a change of way of view of education in developing activity of literacy activity in school. Literacy should be viewed as a capability not necessarily present within the child, but its development will be largely determined by the support and interaction of children with their environment. Based on the findings from several schools, there is a need for a policy that supports the effort to improve the literacy movement can be a culture or habit that is reflected both in the learning in the classroom as well as in real life every day. Not only that, the quality of teachers in creating a literate environment needs to be improved. Teachers are not only required to provide a literary environment, but also to make learning both literacy both read and write can be connected to the child's world as a whole (Compton-Lilly, 2015).

CONCLUSION

Finally, it should be that the learning in the school is actually implemented in accordance with the provisions contained in the Content Standards that are in line with the concept of literacy. The curriculum for Indonesian language learning, for example, should be directed at building a culture of literacy and encompassing the overall competence of language (listening, speaking, reading and writing) not just about language or literature. Therefore, educators must understand the concept of literacy steadily in order to shift the habit of teaching to be learn students to competent in language or literature. It is necessary to keep the teacher to improve the quality of learning by observing the essence of "learning". As a result, it seems that policies need to be able to anticipate various situations such as (1) low reading culture of teachers that have an impact on the lack of mastery of learning materials and methods, (2) low reading interest of students, and (3) lack of facilities and infrastructure in schools.
