Dear Sir/Madam,  
Editor of Journal of Groundwater Science and Engineering

We are a research team and lecturers from the University of Lampung, Indonesia. Our review in the Journal of Groundwater Science and Engineering found that your journal is very dedicated to scientific publications related to groundwater research topics. Therefore, herewith we intend to submit the manuscript of our research results entitled "Groundwater exploration on hard rock terrains in Mount Betung Western Bandar Lampung, Indonesia" as attached in this email. We hope that this manuscript can be received and processed properly. We thank you for your attention.

Best regards,  
Rustadi

Dear author ,

Thanks for your manuscript!

It will be in first check for its innovation and format and others which needs about two weeks.

If it meet the standards for review, it will be in the process of peer-review.

Thanks for your understanding!

Best wishes!

**Reviewer's comments**

Title	Groundwater exploration on hard rock terrains in Mount Betung Western Bandar Lampung, Indonesia		
Date of issue	2021.11.22	Revision return date	2021.12.5

The review has been finished.

In a word, this article is a good work on the whole. Please pay attention to the details before publication as follows:

1、The title, “Groundwater exploration”, was too general and irrelevant to allow the reader to discern the methods used; it would be more appropriate to suggest methods that could be highlighted, such as replacing groundwater exploration with an integrated geophysics method.

2、 Abstract: Please write according to the four elements of question, method, result and conclusion.

3、 The text

1) The geophysical prospecting method used in this paper is gravity method + resistivity sounding method, through the interpretation of points, lines and planes at different levels to achieve the exploration goal, the method combination is very reasonable and has some innovation. It is recommended to add the delineation of anomalies to the flat maps of the different 1/2AB resistivity in Fig. 6 so that the reader can see them at a glance.

2) In chapter 2.1, how elevation were measured? What is instrumental measurement? Please give detail information.

3) In chapter 2.2, the same problem exists, what type of instrument is it? what frequency bands do you apply? The authors should introduce the measuring environment of VES.

4) Are Profile AA' and Profile BB' located along the same place? The author should show them in the same figure.

5) Some of the illustrations in the body are missing legend, please add legend to make the diagram more complete.

6) Reading through the text as if there is no explanation of Fig. 7, which is conclusive and a verification of the results of the survey work, it is suggested that it can be described more about Fig.7 in detail.

The apparent resistivity map should be shown in Figure.7, which the authors can use to better recreate or interpret the characteristics of superficial structure.

**Please send your revised paper before 5-12-2021 to prepare for publication in March 2022. Orelse, it can not be in the list of next issue.**

The manuscript will be in another review after it is revised.

Send us the **modify description file** together with the revised version for quick check.

Please don't hesitate to contact us if there are any problems.

Dear author,

The author should do another one revision:

The conclusions should make more improvement to answer your key scientific question better. Please summarize and refine the conclusion more.

The good conclusion will be the punch line of the paper.

Best regards!

Dear author,

Thanks for your contribution!

The peer-review of your paper titled "Groundwater exploration on hard rock terrains in Mount Betung Western Bandar Lampung, Indonesia" has been finished.

Please find the attachment file the comments.

It will be published in March 2022 if the revision paper is sent back before 5-12-2021.

Also, the author should send the modify description file together with the revised version for quick check.

Thanks for your understanding and support!

Best regards!

Dear Sir/Madam,  
Editor of Journal of Groundwater Science and Engineering

Thank you very much for the comments from peer-review that have been given to correct our manuscript. We hereby resubmit the manuscript which we have revised based on comments from reviewers. We hope that this manuscript can be received and processed properly. If there are things that are not clear from this revised manuscript, please don't hesitate to contact us.  
We thank you for your attention.

Dear author,

Your paper titled "Groundwater exploration using integrated geophysics method in hard rock terrains in Mount Betung Western Bandar Lampung, Indonesia" has been polished by language experts.

The auhot should confirm the text after language polish to make sure the contents are complete.

And the authors name and the affiliations are right.

If your have some revision, please lable it in the text in blue.

If all is right, the version will be the final version for publishment.

Please give us your check result in this week!

Thanks for your support!
