F FENI ROSALIA <feni.rosalia@fisip.unila.ac.id> Tue, Mar 8, 10:38 PM

to info, info, Albet, maria.managing.editor

Dear Editor in Chief,

The original manuscript that I submitted was entitled A Network of Twitter User on Stunting Issue in Lampung, Indonesia with ID: wseas-226 by Feni Rosalia, Yulianto, Tika Kartika, Jeni Wulandari, and Albet Maydiantoro submitted to WSEAS Transactions on Environment and Development in the form of research results.

This study aims to analyze the network of users and hashtags at Twitter messages that are connected to the issue of stunting in Lampung Province, Indonesia. The research process adopts social network analysis (SNA) methods. The research data comes from the Twitter API as many as forty thousand tweets. Data is downloaded, processed, and analyzed with three R, R Studio, and Gephi. Research findings show that Twitter users linked to stunting have different: (a) degree scores (13%, 12%, <10%); (b) betweenness scores (4%, 2.67%, 1.07%, and <1%); and (c) a closeness score that divides the actors into two groups: a closeness score equal to 1 and a closeness score below 1. The hashtags #pakhalmintahstunting and #jokowimembangundesa have become popular hashtags among Twitter users related to stunting issues. This study concludes that central and local government actors both encourage preventive and cross-sectoral intervention even though there are still few collaborations between actors and institutions involved in this process.

I hope you can consider the manuscript of this article because it has new findings. For further correspondence directly to us, via this Email: feni.rosalia@fisip.unila.ac.id

Best regards
Feni Rosalia and Co-Authors
