RADW:

Thank you for submitting the manuscript, "Variation of Fruit Production and Fruit Quality in Response to Different Altitude of 'Crystal' Guava Growing Location " to Biodiversitas Journal of Biological Diversity. With the online journal management system that we are using, you will be able to track its progress through the editorial process by logging in to the journal web site:

Submission URL: <https://smujo.id/biodiv/authorDashboard/submission/9888>  
Username: rwidyastuti

If you have any questions, please contact me. Thank you for considering this journal as a venue for your work.

Ahmad Dwi Setyawan

✉️ Smujo Editors <smujo.id@gmail.com> Kepada: RAD Widyastuti, Rahmat Budiarto, Hayane Adeline Warganegara, Paul Benyamin Timotiwu, Indah Listiana dan 1 lainnya... Jun, 17 Des 2021 jam 17.56 ☆

RAD Widyastuti, Rahmat Budiarto, Hayane Adeline Warganegara, Paul Benyamin Timotiwu, Indah Listiana, Helvi Yanfika:

We have reached a decision regarding your submission to Biodiversitas Journal of Biological Diversity, "Variation of fruit production and fruit quality in response to **different** altitude of 'Crystal' guava growing location".

Our decision is: Revisions Required  
Note: Kindly send your revised paper to a professional English proofreader prior to resubmission.

-----  
Reviewer F:

The influence of altitude on growth, production and fruit quality of a guava variety is investigated. In order for the manuscript to be published, some revisions are necessary beforehand, especially with regard to a real scientific discussion.

Introduction: sentence in line 30-31: add references to this statement. Line 48-50: delete sentence about product appearance of leafy products: it is not the scope of the manuscript. Why is it important/interesting to study the growing performance and quality formation at different altitudes? what is the main objective of this study or what is the hypothesis?

Material and Methods: the different locations are not characterised, please, add data about average temperatures as well as min/max temperatures, precipitation, sunshine hours during the vegetation period.

Results and discussion: the discussion is not a real discussion, but rather a description and comparison with other literature findings. There is no serious discussion of why the two altitudes have an influence on some parameters but not on others. this can only be done on the basis of the respective climate data. The authors should also orientate themselves more on international literature: there are numerous papers there that have investigated the influence of different locations on growth and fruit quality. The conclusions are also somewhat superficial and should be made more concrete.

The manuscript contains some typographical errors and should also be revised with regard to the English language.

Recommendation: Resubmit for Review
